Thony Enechi

Software Engineer
Abuja, Nigeria
Website | Linkedin | Phone | Email

Computer Science graduate with hands-on software engineering experience spanning application development, API design, and database integration. Experienced with C#/.NET and ASP.NET Core, applying object-oriented principles to build web applications, with additional experience in React, SQL databases, Docker, and CI/CD practices.

SKILLS

Programming Languages: C#, JavaScript, TypeScript, Python

Backend: ASP.NET Core, .NET, Node.js, Express.js, RESTful APIs, JWT, OAuth

Databases & Query Languages: SQL, GraphQL, PostgreSQL, MongoDB, Redis

Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3, Redux, Zustand

DevOps & Tools: Docker, Git, CI/CD, Jest, Postman

Core Concepts: Object-Oriented Programming, System Design & Scalable Systems, Testing, Agile Development, Data Structures & Algorithms

PROJECTS

Gym-a-day — C#, .NET, SQL | Backend Repo | Frontend Repo

- Developed a SaaS platform in a team of four, enabling gyms to manage clients and offer pay-per-session access instead of traditional membership contracts.
- Implemented RESTful APIs using C# and .NET for client management, bookings, and payment-related workflows.
- Built frontend interfaces and contributed to database modelling, query development, input validation, and application testing.

EZScents — TypeScript, React, Express, MongoDB | Repo | Website

- Built an e-commerce application for a fragrance brand using TypeScript, React, Node.js, Express, MongoDB, and REST APIs, focused on product discovery, performance, and scalability.
- Implemented a product catalogue with search/filtering, a shopping cart with persistent sessions, JWT authentication, and an admin CRUD system.
- Designed responsive, mobile-first interfaces for product browsing and shopping cart interactions across screen sizes.

EXPERIENCE

Software Engineer (AI & Machine Learning)

University of Johannesburg, Johannesburg, South Africa | Jan 2025 - Dec 2025

- Built an AI system for detecting overhead press form errors using LSTM-based sequence models, improving automated exercise analysis.
- Developed end-to-end data pipelines for video processing, pose estimation, and feature extraction using Python, TensorFlow, and MediaPipe.

- Processed motion data into structured time-series inputs, improving model consistency and performance.

Software Engineer
University of Johannesburg, South Africa | Jan 2024 - Dec 2024

- Built a full-stack academic workflow platform used by postdoctoral researchers and administrators to manage research activities, improving cross-departmental coordination and data accessibility.
- Developed core system features including project submission workflows, role-based access control for different user groups, and secure REST APIs using React, Node.js, and PostgreSQL.
- Led frontend development in a 4-person engineering team and contributed to system architecture decisions and Docker-based CI/CD deployment pipelines.

Web Developer (Contract)
Enactus Mount Allison University, Canada | Jun 2022 – Sep 2022

- Built a web platform enabling students to buy and sell used textbooks, improving access to affordable academic resources within the university community.
- Developed responsive frontend interfaces for listing creation, browsing, and product detail views, ensuring usability across mobile and desktop devices.
- Collaborated with a small team to translate requirements into clean, maintainable UI components focused on performance, accessibility, and user experience.

EDUCATION

University of Johannesburg
BSc (Hons) in Computer Science, AI Specialization | Jan 2023 – Dec 2025

Mount Allison University
BSc in Computer Science and Mathematics | September 2020 – April 2022
Transferred to the University of Johannesburg in 2023
